DETAILED ACTION

1. Applicant's response filed on 06/16/2003 has been fully considered. Claims 1, 3, 4, 6, 7, 9, 13, 14, 16 and 17 are pending. Previous prior art rejection has been withdrawn in view of Applicant's amendments and comments.

Election/Restrictions

2. Applicant's election of Species A in Paper No. 10 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

3. Since Species A is allowable (see Reasons for Allowance below), the Examiner examined Species B.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1, 13 and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Luckenbach (US 4,803,256).

Art Unit: 1774

Luckenbach discloses a method of treating a polyester textile in order to enhance the printability (col. 4, line 33) of the polyester by contacting the polyester with an active substance such as aromatic dicarboxylic acid (claims 4 and 13). The textile is woven (claim 9). With respect to solubility value of the organic acid it is elementary that the mere recitation of newly discovered function or property, inherently possessed by things in the prior art, does not cause a claim drawn to those things to distinguish over the prior art. *In re swinehart et al.*, 169 USPQ 226 at 229. Since the Luckenbach reference teaches all of Applicant's claimed compositional and positional limitations, it is inherent that the reference article function in the same manner claimed by Applicant. The burden is upon Applicant to prove that the subject matter shown to be in the prior art does not possess the characteristic relied on.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 14 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Luckenbach (US 4,803,256), as applied to claims 1, 13 and 16, above.

Luckenbach does not disclose the claimed amount of the organic acid such as aromatic dicarboxylic acid. The experimental modification of this prior art in order to ascertain optimum operating conditions fails to render applicants' claims patentable in

Art Unit: 1774

the absence of unexpected results. *In re Aller*, 105 USPQ 233. One of ordinary skill in the art would have been motivated to adjust the amount of the organic acid in order to optimize the printability of the surface of the textile. A prima facie case of obviousness may be rebutted, however, where the results of the optimizing variable, which is known to be result-effective, are unexpectedly good. *In re Boesch and Slaney*, 205 USPQ 215.

Allowable Subject Matter

8. Claims 3, 4, 6, 7 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The closest art Hamada et al. (US 6,177,181 B1) neither teaches nor suggests its porous membrane has an organic acid with certain solubility as the claimed invention.
